
GENDER EQUALITY AND BEYOND: PERCEPTIONS OF VISIBLE MINORITY WOMEN AND MEN WHEN IT COMES TO DISCRIMINATION IN THE WORKPLACE

AND THE CANADIAN RACE RELATIONS FOUNDATION

MARCH 9 2020

UN CHIEF SAYS GENDER INEQUALITY BIGGEST HUMAN RIGHTS CHALLENGE

- March 8 was International Women's Day, a global day celebrating the social, economic, cultural and political achievements of women. During 2020 observances of International Women's Day, UN Secretary-General Antonio Guterres described the fight for gender equality as "the biggest human rights challenge we face." To mark international women's day the Association for Canadian Studies and the Canadian Race Relations Foundation are releasing the results of a national survey on gender equality in the workplace with a focus on how discrimination may increase when gender identities intersect with immigrant and visible minority status. "Intersectionality" is an area of growing interest in research around discrimination and vulnerability and the detailed survey that follows seeks to provide an important example in pursuing this much needed area for inquiry.

KEY STUDY FINDINGS

- More than three in four Canadians agree that the situation for women in the workplace has improved over the past decade; men more likely to agree
- But 61% of men and 39% of women respectively believe that with the same education and skills, a woman and a man have the same chance for economic success
- Men (58%) more likely than women (46%) to agree they are paid fairly for the work that they do
- Visible Minority Women are most likely to believe they are not paid fairly for the work that they do
- Visible Minority women born in Canada are least likely to believe they are paid fairly for their work
- Nearly four in ten visible minority men and women say they have often or sometimes encountered discrimination at their place of work because of the color of their skin
- Nearly half of visible minority immigrant women say they often or sometimes encountered discrimination at their place of work because of the color of their skin
- Over one in three visible minority women say that they have often or sometimes encountered discrimination at work because of their gender

METHODOLOGY

- The survey was commissioned from the firm Leger Marketing for the Association for Canadian Studies and the Canadian Race Relations Foundation and was conducted with a sample of 1389 Canadians nationally via web panel during the week of November 11th ,2019. It has a probabilistic margin of error of 2.9 percent 19 times out of 20.
